

PRESCRIBING RECOMMENDATIONS: ADULT

OPEN's Opioid Prescribing Recommendations are designed to help frame meaningful conversations between patients and providers, so every pain management plan is tailored to the individual. These recommendations are rooted in research, patient-reported outcomes, and expert consensus. They are intended for patients who haven't used opioids before surgery. Explore OPEN's evidence-based recommendations for safer prescribing after adult surgery below. Learn more @ michigan-open.org/prescribing-recommendations/.

CATEGORY	PROCEDURE	OXYCODONE 5MG TABS
