

Substance Use Disorder (SUD) Care Coordination

OPEN

Evidence. Resources. Engagement.

IMPACT REPORT 2023

OPEN collaborates with partners in acute care to implement standardized substance use disorder (SUD) screening and care pathways to effectively identify patients with Opioid Use Disorder (OUD) and/or SUD and connect them to treatment.

EVIDENCE

2 in 5

patients present with **risky substance use** before elective surgery

patients with **opioid use** before surgery likely use

more opioids after surgery

70%

of patients screening **positive** using a standard tool **were missed** by usual documentation

RESOURCES

Screening and Care Coordination Guide and website developed to share best practices for care providers on:

- Standardized screening
- Interpreting results
- Action steps to care for patients scoring positive

Continuing Medical Education Credits for SUD Care Coordination

Interactive training on **Medication for Opioid Use Disorder** developed

ENGAGEMENT

600+ patients

screened before surgery to detect risky substance use

700+ providers

trained in prescribing Medication for Opioid Use Disorder

450+ surveys

conducted with patients and providers demonstrate **screening is feasible and acceptable**
