

Acute Care Pain Management - Pediatrics

IMPACT REPORT 2023

OPEN works on prevention of opioid dependence, abuse and overdose in children and adolescents by intervening at the point where many are first introduced to them—when acute pain is treated following surgery.

OPEN

Evidence. Resources. Engagement.

EVIDENCE

RESOURCES

ENGAGEMENT

1,800+ 

Patients' prescribing data and 1,200+ patient reported outcomes surveys collected

20+ procedures

with updated opioid prescribing recommendations

Found that significantly more opioids were prescribed to children in the overweight and obese BMI categories compared to those in the healthy weight category

Pediatric Surgical Pain Management Toolkit and website developed to share best practices for providers, patients, and their families on:

- opioid prescribing
- non-opioids
- pain management

35,000+

copies of 5 different education materials distributed

9,000+

Visits to [Pediatric Website](https://michigan-open.org/pediatrics/). Find best practices, materials, tools and resources:

<https://michigan-open.org/pediatrics/>

4000

Medication disposal pouches distributed to pediatric providers in Michigan in 9 months

3

presentations

to share findings at conferences within Michigan and nationally
