Opioid Prescribing Recommendations

OPEN
Evidence. Resources. Engagement.

IMPACT REPORT 2023

OPEN aims to expand the application of procedure-based opioid prescribing recommendations by analyzing data using patient reported outcomes, extensive literature reviews, and expert opinion. Our recommendations are meant to be a tool for prescribers when tailoring pain management.

EVIDENCE	RESOURCES	ENGAGEMENT

EVIDENCE

92% of patients have **LEFTOVER OPIOIDS** after common surgeries

Prescription size is the **STRONGEST** predictor of how how much opioid a person will use

NO CORRELATION between probability of refill and amount of opioid prescribed

RESOURCES

70+ **evidence-based** opioid prescribing recommendations for common adult and pediatric surgeries

Developed standardized **Pain and Opioid Data Collection Recommendations**

Yearly review of recommendations to ensure pain control and patient satisfaction are maintained
